Hi Mark,

Steve is providing some great support on landfill issues. While showing me a map which I requested, he also pointed out the Champ Landfill which appears to be upwind of the concerned communities during south winds. Have you had this landfill on your radar for a compliance review? See below.

Thanks.

Josh

Subject: Bridgeton area discussion follow-up

Josh,

Earlier today, you asked that I send you a summary of information I found about the area

around Bridgeton and the West Lake Landfill.

About half a mile south/southwest of the Spanish Village neighborhood is the largest (by tons) landfill in the state. It was originally operated by Fred Weber, Inc., then was sold to Charles Flood in 2011. Since that time, it has been operating under the name Champ Landfill. The operating face is in the northern part of the property, closest to Spanish Village. The facility takes in approximately $\frac{1}{4}$ of the total tonnage of the entire state of Missouri at around 1.1 million tons per year.
